

Suction Hose Couplings

Sizes: 4" x 4" or 5 1/2" x 5 1/2"

Materials: Light Alloy (Aluminium) Gunmetal

Pressure: N/A

Details: Suction couplings are used to connect together suction hoses. The coupling halves are normally threaded with a special round thread to BS336 and screwed together to compress a sealing washer. Unlike the instantaneous coupling this arrangement produces an effective seal under suction conditions. Direction of flow of water is conventionally from the female half to the male half of a coupling. The threaded part of the female half swivels relative to the tail so that the coupling halves can be screwed together without twisting the hose. Female halves have 4 lugs and male halves 2 lugs.

BS ROUND THREAD SUCTION HOSE COUPLINGS

PART NO.	HOSE TAIL SIZE	MATERIAL	PRICE
CLMPRT400H400	Male half 4" x 4"	Light Alloy	POA
CLFPRT400H400	Female half 4" x 4"	Light Alloy	POA
CLMRT550H550	Male half 5 1/2" x 5 1/2"	Light Alloy	POA
CLFRT550H550	Female half 5 1/2" x 5 1/2"	Light Alloy	POA
